

## ***Safety Alert-Epinephrine Package Labeling***

The FDA has required the removal of ratio expression from the labeling of single-entity injectable drug products and replaced with the amount per unit of volume.

New labeling is now circulating through the hospitals' stock and into PEMS Medication Boxes.

2020 PEMS Protocols will reflect the old and new product labeling until the ratio expression is out of circulation.

Established Name	Ratio	Amount per Unit of Volume
Epinephrine Injection, USP	1:1,000 1:10,000	1 mg/mL 0.1 mg/mL
